

POONYAWAT KHOMLEK

FULL STACK DEVELOPER

Email: Poonyawat0931@gmail.com

Phone: +66 65-521-6629

Linkedin: [poonyawat-khomlek](#)

Github: [poonyawat0511](#)

I'm software Engineering student and focus on fullstack development, currently I'm learning about various framework to Increase efficiency API for the website, mobile application and design an architecture of software.

AREA OF EXPERTISE

Language: Java, JavaScript, TypeScript, Go, C#, Dart

Backend: Spring Boot, Nestjs, Gofiber

Frontend: Nextjs, React, Nuxtjs, Vuejs, React Native Expo, Flutter

Database: PostgreSQL, MySQL, MongoDB, SQLite

Tools: Kafka, CamundaBPMN, Docker, Google cloud console, Nginx

WORK EXPERIENCE

Online payment

Jan 2026 - May 2026

Developed and implemented a full-stack internal web application for OceanLife to digitize the accounting department's manual, paper-based fund withdrawal process.

- Developed backend services and RESTful APIs using Java Dropwizard.
- Designed and optimized database queries to seamlessly integrate with Java APIs for efficient data retrieval.
- Built a responsive frontend user interface using React, strictly adhering to System Analyst (SA) specifications.

Land Management System (LMS)

Aug 2025 - Dec 2025

Developed a comprehensive Land Management System for a real estate business in Chiang Mai. Key responsibilities included gathering stakeholder requirements, recommending the optimal technology stack, designing the database architecture, and building both backend services and a responsive frontend.

- Designed and developed RESTful APIs using Go Fiber for efficient CRUD.
- Built a responsive and user-friendly frontend admin dashboard using Nuxt.js.
- Implemented secure user authentication using JSON Web Tokens (JWT) and Role-Based Access Control (RBAC) to manage user permissions.
- Integrated Cloudflare S3-compatible storage for secure and scalable document management.

HLLC – 2025 On campus

May 2025 - Aug 2025

Develop and implement backend services for HLLC, an activity tracker for fresher at Mae Fah Luang University, enhancing engagement and participation.

- Design and integrate WebSocket with Go fiber for real-time community chat.
- Developed CRUD API and manage MongoDB for efficient data handling.
- Parallel to the mobile application, a student website was implemented.
- Built features like activity check-ins, permission, and admin management system.

HLLC – 2024 On campus

May 2024 - May 2024

Development and implement backend services for HLLC, an activity tracker for fresher at Mae Fah Luang University, enhancing engagement and participation.

- Designed and integrated Socket.io with Nestjs for real-time community chat.
- Development CRUD API and manage MongoDB for efficient data handling.
- Implemented RBAC security for user authentication and permissions.
- Built features like activity check-ins, gamification, notifications, and admin reporting.

PROJECT EXPERIENCE

Maechan project

Nov 2024 - Apr 2025

Senior project of Software Engineering major was contact with real stakeholder at Maechan Hospital Chiang Rai, Develop system to improved purchase request method in hospital more effective and less paper document and has a notification by using Line messaging API in this project using Kafka and BPMN process Camunda 7 for design business logic instead hard code by BPMN diagram implement with Java Spring Boot.

- Designed and integrated business logic with BPMN Diagram and using BPMN tools.
- Development CRUD API with Java Spring Boot.
- Analyzed Hospital Database (PostgreSQL) and implement it work with Web application.
- Implemented RBAC security for user authentication and permissions.
- Development Web application by using Nexjs.
- Notification by line messaging API.
- Deployment on Google cloud console by VM Linux Ubuntu and using Nginx to traffic managing.

Platform Development (MFU Library)

Aug 2024 - Nov 2024

Developed a "Smart App" for booking university library rooms as a third-year project for the Platform Development course. This challenge required applying full-stack skills to design the system architecture and collaborating with three different teams to deliver a complete solution.

- Engineered the backend system and APIs using NestJS, and implemented Role-Based Access Control (RBAC) for secure system management.
- Managed and stored application data efficiently using MongoDB.
- Built a responsive admin web dashboard using Next.js to manage room availability and user bookings.
- Developed a cross-platform mobile application using React Native Expo, allowing users to easily book library rooms from their phones.
- Collaborated closely with three different teams to integrate all components and ensure a smooth user experience.

My wallet

Feb 2024 - Apr 2024

Developed a personal finance mobile application for tracking daily income and expenses. This was a second-year project for a Mobile Application course in the Software Engineering major, designed as a challenge to create a complete app and understand the business side of mobile development.

- Built a cross-platform mobile application from scratch using Flutter and Dart.
- Implemented SQLite as a local database to store and manage users' financial transactions on their devices.
- Learned and managed the process of deploying the application to the Google Play Store to make it available for real clients.
- Applied SEO (App Store Optimization) strategies to improve the application's visibility and search ranking on the store.
- Gained hands-on experience in the business aspects of publishing a mobile application.

Cafe Management

Feb 2024 - Apr 2024

Developed a web application for cafe management as a first-semester, second-year university project. This was my first experience building a complete web application by taking requirements from third-year senior students, who acted as the clients.

- Developed the backend system using Java Spring Boot to handle basic CRUD (Create, Read, Update, Delete) operations.
- Designed and connected a MySQL database to store and manage the cafe's data.
- Built the frontend web pages using Spring Thymeleaf to display data from the server.
- Practiced gathering requirements and communicating with seniors to ensure the application met their needs.

EDUCATION

MAE FAH LUANG UNIVERSITY (Expectation Graduate)

May 2026

Bachelor of Engineering Programme in Software Engineering

- School Applied Digital Technology.
- Major Software engineering.
